

How To Install BoatNanny™ Alarm System

The BoatNanny™ was developed with the consumer in mind so the entire installation process is very simple. The BoatNanny™ makes use of wireless technology in order to send information between the Base Unit and the Remote Unit. The advantage of this type of system is that there are no installation fees and no hardwiring of the system. Below is a step by step procedure - from removing the BoatNanny™ out of its box to actually using the text messaging feature of the BoatNanny™.

1. Remove the BoatNanny™ Base and Remote Unit from the packaging.
2. Plug in either the 12VDC or the 120VAC adapter into the Base Unit. Place the Base Unit in the cabin of boat, pointing the motion sensor toward the entrance.
3. Take the Remote Unit and attach a float switch to the wire protruding from the case.
4. Mount the Remote Unit in the engine room, along with the float switch, near the bilge pump.
5. Turn on the power and wait until the LED turns to solid green.
6. Using your cell phone (or from www.cingular.com or www.t-mobile.com), send a text message to your BoatNanny™ (the number registered with the SIM card). The text message should consist of the number 11, followed by your cell phone number. For example, enter 115080000000, where your cell phone number is 508-000-0000.
7. Within a minute, you should receive a confirmation text message from your BoatNanny™.
8. **It's that simple.** Go to our website at www.paradoxmarine.com for more advanced program instructions.

NOTE: For your convenience, The BoatNanny™ staff will install a pre-activated SIM card. Just provide to us (up to three) cellphone numbers that you want an alarm message to be sent to and your BoatNanny™ will work right out of the box. Nothing to program or install, just plug it in!!! No fee for the programming/installation of SIM card. Service is offered by Datablaze/T-Mobile and includes 300 text messages/month for under \$10. For more details call Paradox Marine at 866 929-4441.
